

WHEN PASSION HAS A MEANING

Sustainability & Innovation

Sustainability & Innovation

MSC is proud to present **the world's largest container ship MSC Gülsün, which sets a new standard in container shipping.**

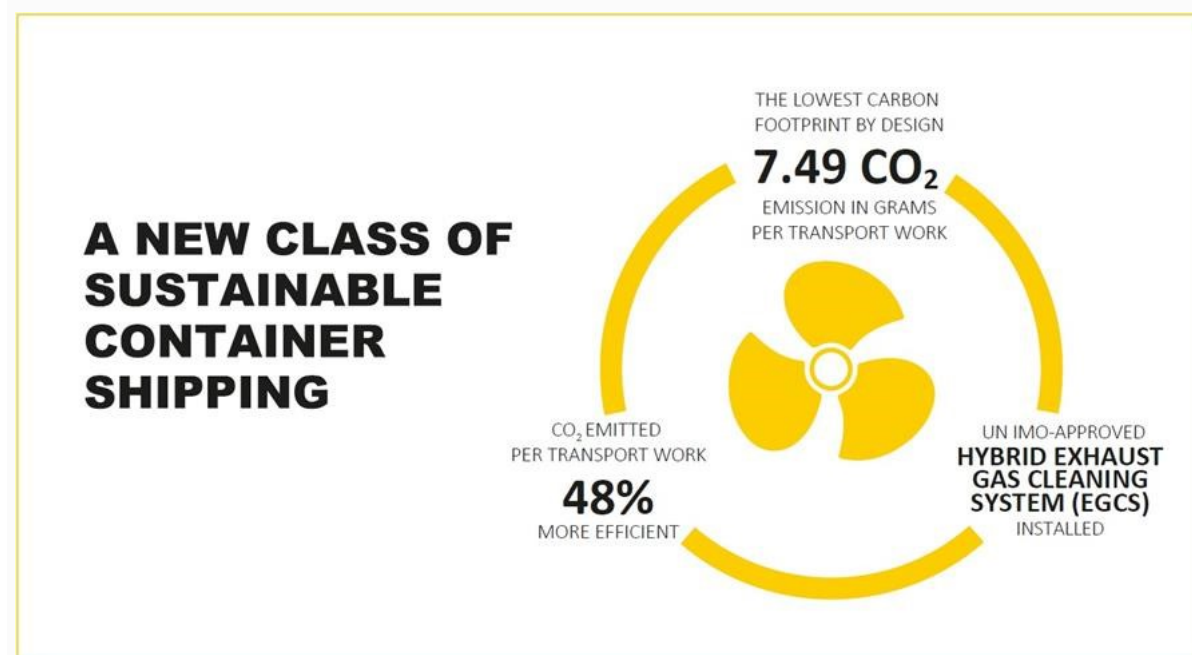

Our passion for the sea and commitment to helping our customers maintain sustainable supply chains have driven us to invest in some 11 ultra-large vessels, beginning with MSC Gülsün.

At some **400 metres long** and more than **60 metres wide**, MSC Gülsün has a **record-size capacity** for a container ship, **23,756 TEU**, and is already deployed on our Silk Service. The brand-new class of 23,000+ TEU vessels to be added throughout 2019-2020 to our East-West network, moving goods sustainably between Asia and Europe, and connecting the rest of MSC's global network of shipping services.

Bigger ships generally emit less CO₂ per container carried, helping companies which ship goods on MSC's services between Asia and Europe to lower the carbon footprint of their supply chains. In addition, all 23K+ TEU ships are shore-power enabled to minimise emissions at berth at ports which provide such facilities.

MSC Gülsün has a UN IMO-approved hybrid exhaust gas cleaning system to ensure compliance with the upcoming IMO 2020 regulation and has the option of switching to low-Sulphur fuel.

The ship can carry more than 2,000 reefer containers.

We strive to be our customers' most reliable partner when it comes to the common goal of **reducing the carbon footprint of goods moved around the world**. We also prioritise the safety of our seafarers and of your cargo, by ensuring the new class of ships is equipped with features such as double hull protection and our dual-tower fire-fighting system. We do it for our customers, for our partners and for our home: the sea.
