

## **Globalink Logistics Boosts Fleet with Advanced SITRAK Tractors to Lead in Central Asia and Beyond**

Globalink Logistics, a dominant force in Central Asia's logistics and transportation sector, the Caspian, and the Baltics, has significantly enhanced its operational capabilities. The company recently integrated 35 advanced 540 HP 6X4 heavy SITRAK tractors to expand its heavy-haulage fleet. This upgrade is crucial for improving the efficiency of trade routes between China, Central Asia, and the Turkey-Black Sea region.

These tractors are sourced from Sitrak Trucks, resulting from a collaborative venture between China's Sinotruk and Germany's renowned truck manufacturer, MAN. The new SITRAK models epitomize the pinnacle of this partnership, combining robust German engineering with innovative technology.

Moreover, Globalink has expanded its heavy haulage arsenal with diverse trailers, enhancing its Industrial Projects Unit (IPU). This unit specializes in sectors like Power Generation, Energy, Oil & Gas, and Mining and offers comprehensive, fully integrated project logistics solutions to a diverse client base.

Siddique Khan, CEO of Globalink, lauds the high-quality production of the SITRAK trucks. These vehicles meet European quality standards and are equipped with advanced engine technologies and efficient drivelines that significantly reduce emissions and lower fuel consumption. This initiative is crucial for Globalink's commitment to reducing its carbon footprint. The robustness of these trucks makes them particularly well-suited for Central Asia's challenging terrains and extreme weather conditions.

By making these strategic investments, Globalink strengthens its leadership position and underscores its commitment to sustainability and excellence. These advancements ensure that Globalink continues to lead in project service delivery across vital regional trade networks.
